Volvo

Performance tuning options available below;
Switchable tuning is available on most applications with either the SRS or SRS II units.

DNA Tuning performance or economy software will make it possible for your vehicle to reach its potential. A DNA Tuned vehicle will provide you with safer overtaking, better fuel economy, a smoother more pleasurable drive and no need for the huge outlay of buying a new vehicle, a new lease of life is given to your car making it feel like a totally new one.

Model	Variant	Original BHP	Price	SRS II	DNA Tuning Performance

Don’t worry if you can’t see your model above, it doesn’t mean we don’t offer any performance or economy software tuning for it. Please contact your nearest DNA Tuning Approved dealer for more information.

The figures above are intended as a guide, as each vehicle will differ due to general wear and tear, you will usually see better performance on a well maintained car and our dealers will carry out a full diagnostic check before applying the upgrade for your peace of mind. We always recommend high quality fuel like Super+/98/99 Octane but it is not essential unless strictly specified. All the vehicles existing safety features remain in tact and the software is undetectable to main dealer access. If at any time you sell the car and wish to remove the software we will do this at no cost although the software will add to the value of your vehicle if you quote it is DNA Tuned!

Any of the upgrades will be changed to suit the brief of the customers requirement, if you have any specific requirements please ask.

All DNA Tuned software comes with a lifetime warranty on the software. An additional Mechanical Warranty is available, please enquire for further details.
