

Welcome to the DNA Tuning website

ECU tuning by the experts, with over 25 years experience in the high performance tuning of engines with today's complex management systems and the most up to date technologies available used in house DNA Tuning is the industry world leader in terms of technology features and value. Our aftermarket products incorporate the ability to run a variety of engine performance modes, disable the vehicle completely where necessary for security, and in some cases make minute changes specific to a customers vehicle giving a better than OEM finished product. All our software is developed to give you the smoothest and the most power where needed, reliably from your vehicle. How do we differ from other tuning companies? We actually write the software and have a real passion to be the best, this you will hear from all our customers past and present.

Whether you want higher power, more torque and smoother gains across the rev range, a broader power band, or simply better fuel economy then DNA Tuning have the knowledge and capability to shape your engines characteristics around the way you drive. All of this is done by working with instead of against the original vehicle systems. The vehicle can be completely returned to its original state at any time.

DNA Tuning is the answer for the customer who cares about performance and quality. We do not change settings to dramatic levels or use boost spiking for that 'feels' quick effect, where in reality performance would be lowered where an ECU can adapt out these dangerous levels. Instead we tailor many changes throughout the rev range altering many perimeters others neglect to give optimal performance throughout.

DNA Tuning is the answer for the customer looking for improvements in economy; our economy tuning is unique in the industry removing limits set by the manufacturer that will free power and capability which would otherwise lay dormant. Increasing torque will yield better MPG, with saving being seen on fuel of up to 20%.

DNA Tuning offers support for various current race teams in several formulae and many track cars. If you have any specific requirements please contact us with your detailed specifications. To find your nearest DNA Tuning approved dealer please [click here](#)
